div.f user agent stylesheet

The screenshot shows a browser window displaying a website with a grid layout of cards. The developer tools are open, showing the CSS code for the grid columns. A red box highlights the media query at line 94:

```
@media screen and (min-width: 992px) { .blogs-center { grid-template-columns: repeat(4, 1fr); }}
```

This media query defines a grid with 4 columns for screens 992px and wider. The browser's dimensions are shown as 992 x 1468.

The browser's sidebar shows the DOM structure and styles applied to the page elements.

The screenshot shows a browser window with developer tools open. The left pane displays the code for style\_02.css, specifically the .blogs-center media queries for widths 1200px and 1400px. The right pane shows a grid of 9 blog cards labeled "Latest Blogs: Using Breakpoints". A red box highlights the "Dimensions" panel where the width is set to 1200px. Another red box highlights the .blogs-center element in the DOM tree, which has a grid-template-columns: repeat(5, 1fr) style applied.

```

@media screen and (min-width: 1200px) {
    .blogs-center {
        grid-template-columns: repeat(5, 1fr);
    }
}

@media screen and (min-width: 1400px) {
    .blogs-center {
        grid-template-columns: repeat(6, 1fr);
    }
}

```

This screenshot is similar to the one above but with a different media query configuration. The .blogs-center media query for 1400px is highlighted with a red box. The browser shows 6 columns in the grid. The "Dimensions" panel shows a width of 1400px. The DOM tree shows the .blogs-center element with a grid-template-columns: repeat(6, 1fr) style.

```

@media screen and (min-width: 1400px) {
    .blogs-center {
        grid-template-columns: repeat(6, 1fr);
    }
}

```
